

Titanium Personal Defense Weapon

Titanium Personal Defense Weapon

This compact AR-15 based PDW (personal defense weapon) in solid mil. spec. titanium is exceptionally durable and 33% lighter, while the 7" replacement barrels for legacy AR-15, are 45% lighter. Whether in need of an entire new titanium gun or titanium replacement barrel, both greatly ease the burden-of-carry and free-up weight capacity for security personnel and enthusiasts alike. Weight reduction further enhances performance, by increasing the speed, mobility and ease of target acquisition and target tracking,

as well as enhancing user endurance and related user accuracy.

Barrel-life is doubled and maintenance is minimized, greatly reducing long-term cost of ownership through the combination of proprietary bore/rifling hardening, and titanium naturally being impervious-to-corrosion. Reliable non-binding action of moving parts is ensured by proprietary titanium hardening and lubrication treatments. The gun is entirely fabricated from solid titanium except for the ballistic polymer trigger-grip.

FEATURES

33% LIGHTER

- 45% lighter barrel than steel counterpart
- Easier carry & comfort
- More weight-capacity for other items
- Faster target acquisition & tracking
- Increased endurance & related accuracy

2X MORE DURABLE

- Proprietary treatment doubles barrel life
- Proprietary treatment ensures non-binding
- Impervious-to-corrosion
- Minimized care & maintenance

33%
LIGHTER
THAN COMPARABLE AR-15

2X MORE
DURABLE
