

# Titanium Tactical Rifles

# Titanium Tactical Rifles

This full size .223/5.56 AR-15 platform with four key parts in solid Mil-Spec billet titanium is exceptionally durable and 33% lighter, while the 14.7" or 16.1" barrels alone are 45% lighter than steel barrels. The four key titanium components are the barrel, lower, upper, and keymod forend which greatly

ease the burden-of-carry, freeing up weight capacity for security personnel. Weight reduction and a center of gravity closer to the shooter further enhances performance by increasing the speed, mobility and ease of target acquisition and target tracking, as well as enhancing user endurance and related user accuracy. Includes titanium compensator/ muzzle break.

With the combination of our proprietary bore and rifling hardening at the molecular level, and titanium's natural imperviousness to corrosion, our

barrel life is doubled. Test firing 20K rounds showed zero wear for commercial applications and rating, minimizing maintenance and greatly reducing long-term cost of ownership.

Other features include a nickel-boron coated BCG rated for full auto, MPI test, and staked gas key; enhanced nitride treated Mil Spec single stage trigger, creep adjusted, polished engagement surfaces, crisp 5lb break; pinned compensator; low profile gas block; ambidextrous, hard coat anodized charging handle; 6-position collapsible stock with Mil-Spec polished buffer tube; 30 round black polymer magazine; and polymer A2 style pistol grip; available in matte black and titanium.

## FEATURES

### 33% LIGHTER

- 45% lighter barrel than steel counterpart
- Easier carry & comfort
- More weight-capacity for other items
- Faster target acquisition & tracking
- Increased endurance & related accuracy

### 2X MORE DURABLE BARREL

- Proprietary treatment doubles barrel life
- Titanium is impervious-to-corrosion
- 20K rounds show zero wear
- Rated for commercial applications

**33%**  
**LIGHTER**  
THAN COMPARABLE AR-15

**2X MORE**  
**DURABLE**
